Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: The 102 and 103 rejections with regards to Baulier as it applies to the instant application. Specifically, the 102 rejection based on the mapping of file segments, wherein file segments are not copied into the main memory for claims 3, 30, and 35 was discussed, and how it overcomes the prior art. This is tentatively found to overcome the prior art, and an updated search will be done. The 103 rejection of claim 1 and 33 were discussed, in regards to the objects of file segments are directly interconnected by memory pointers, as compared to Baulier, where objects pass through an additional table. An updated search will be done for this limitation. No agreement was reached in regards to allowance. .
